LoMIS Suite

Our Purpose

eHealth Africa (eHA) is a health social enterprise which builds stronger health systems through the design and implementation of data-driven solutions. We respond to local needs and provide underserved communities with tools to lead healthier lives through the integration of information, technology, and operations. This strategic advantage allows us to deliver specialized infrastructure services.

Our Expertise

eHealth Africa develops data-driven solutions and software as a service to health commodity logistics providers at various levels without being mandated to utilize eHA's third-party logistics services.

The LoMIS Suite Solution

In 2014, eHealth Africa (eHA) began building a suite of mobile and web applications LoMIS Stock and LoMIS Deliver to address the supply chain challenges such as poor infrastructure, late deliveries of life- saving commodities and cumbersome paper-based systems for reporting and logistics, which lead to slow and inefficient decision- making.

Together, eHA's LoMIS Stock and LoMIS Deliver applications provide critical solutions to health commodity availability, vaccine management challenges and enable broader health system policy decisions at the state level and national level.

80%
reduction in vaccine stock rates in Kano State

67%
increase in 24 hour responses to stock out reports with LoMIS stock in Kano state

26K+
successful deliveries with LoMIS deliver since 2015

L○MIS DELIVER 🚚

LoMIS Deliver is a technology-based information system that enables logistics service providers to plan, schedule, manage and monitor their pick-up and delivery tasks in near-real-time. The solution is comprised of:

- Web dashboard application, that supervisors can use to plan and monitor deliveries and pick up tasks.
- Mobile application that drivers can use to report the status and details of the tasks assigned to them.

With LoMIS Deliver, clients are given a near real-time visibility of distribution and status of goods in transit.

User accesses the LoMIS Stock web dashboard

L○MIS STOCK 📦

LoMIS Stock enables health-workers at the last mile health facility, their supervisors and other stakeholders get health commodity stock visibility in order to make informed decisions. LoMIS Stock is comprised of:

- Offline, SMS capable mobile applications installed on Android phones and tablets for health workers.
- Web application dashboards that aggregate stock levels and utilization from the last mile facility.
- LoMIS stock provides visibility of stock and the status of cold chain equipment at the last mile health facility. It also reduces data collection and reporting errors associated with traditional paper-based information management systems.
