eIDSR

Our Purpose

eHealth Africa (eHA) is a health social enterprise which builds stronger health systems through the design and implementation of data-driven solutions. We respond to local needs and provide underserved communities with tools to lead healthier lives through the integration of information, technology, and operations. This strategic advantage allows us to deliver specialized technological solutions in disease surveillance in Sierra Leone and Liberia.

The electronic Integrated Disease Surveillance and Response system (eIDSR) was created to improve the flow of information within health systems. Paper-based methods present challenges that make health and disease data reporting time-consuming and prone to errors, resulting in questionable credibility and completeness of information.

Our Approach

Our approach is a purpose-built digital data collecting and reporting tool. The tool is integrated into the national health system through its compatibility with the health information system DHIS2 which is used in over 45 countries, including many with vulnerable health systems.

Our Expertise

We have credibility and experience in the successful launch, implementation and technical expertise of eIDSR. As proven through pilot programs implemented in six health facilities located in Sierra Leone's Port Loko district. We offer a user-friendly solution that enables public health workers to collect, report and analyze data on one platform.

Our regional knowledge enables us to incorporate features that tackle challenges such as low connectivity and inconsistent power availability. Reinforced by expertise in expansive implementation, targeted training, mentorship and the delivery of necessary logistics and hardware, we present a stellar solution for health data collection and reporting.
