

# VACCINE DIRECT DELIVERY: REDUCING VACCINE STOCK OUT RATES

Vaccine Direct Delivery (VDD) is a third party logistics service provided to the State Primary Healthcare Development Agencies, to provide efficient distribution of vaccines and dry commodities from state cold stores to health facilities at the ward level.

The service provides quality data for vaccine quantity delivered with remote temperature monitoring of vaccines in transit (Vaccine Quality), delivery planning & scheduling as well as driver delivery route optimization which improves general vaccine management and reporting to aid decision making for the States Primary Health Care Boards

The following data shows the reduction in vaccine stock out rate at last mile health facilities in Bauchi, Kano, Sokoto, and Zamfara states:
